❋ Skills

HTML   CSS   Javascript

React   Redux   Nodejs

MongoDB   MySQL   PostgreSQL

Git

❋ Languages

▸ Spanish (Native)
▸ English (Fluent)

💼 Work Experience

Frontend Engineer – InterNations

📅 May 2018 – **Present**

▸ Maintained external sections of the platform developed with PHP, Twig, CSS (Less in a BEM–like convention) and Backbone.

▸ Developed multiple components using React and Redux and assisted in multiple integrations between existing Backbone components and new React features.

▸ Troubleshot issues related to our build process with webpack and reduced the time required for the deployment process.

▸ Rebuilt the registration process in React while keeping the requirements for the backend at a minimum and maintained the features tested via automated acceptance tests. Manage to improve the UX as well as the internal manual approval process, reducing the amount of effort required to handle user registrations.

Software Engineer – Networkly

📅 Nov 2017 – May 2018

▸ Led a remote team (4 developers and 2 designers) in the development of a professional networking platform.

▸ Worked closely with the CEO, helped him elaborate a business plan and translated his needs and ideas into technical requirements.

▸ Did multiple series of user testing and translated their feedback into technical requirements.

▸ Designed the architecture of the platform which involved technologies as Node.js, Express.js, Socket.IO, MongoDB, Elasticsearch, AWS, React and Redux.

▸ Maintained a close relationship with our designers and developers to establish a collaborative environment, promote open communication and keep the team motivated.

Full Stack Developer – Codefuel

📅 Jul 2015 – Sep 2017

▸ Developed a React application and assisted in the development of multiple AngularJS applications, a Node.js API and the design of the DB (Postgres).

▸ Met regularly with our users to gather feedback and ensure that the roadmap of the platform was aligned with their needs.

▸ Enhanced the team's workflow by integrating modern web development tooling as browserify, babel and webpack.

▸ Developed a Magento extension to integrate the platform with MercadoLibre's API and manage all MercadoLibre's activity (articles, orders and questions) within Magento.

❋ Education

Systems Engineering – Universidad Metropolitana

📅 2010 - 2016

▸ Learned about Algorithms, OOP, DB, DBA, MIS and Software Engineering among others.

▸ Was part of the Systems Engineering's Students' Union two consecutive years.
